

Jefferson Kodua Ampadu

Accra, Ghana / jephampadu@gmail.com / jefferson.github.io / +233 54 146 6245

Summary

Aspiring and solution-driven Software Developer with hands-on experience in building practical software systems. Passionate about creating efficient, scalable applications and solving real-world problems through technology. Experienced in full-stack development with a strong foundation in the fundamentals.

Skills and Technologies

Programming languages: Python, JavaScript

Web Development: RESTful API, Flask

Database: PostgreSQL, MySQL

Tools & Technologies: Git, GitHub

Soft Skills: Problem-Solving, Fast Learner, Teamwork, Communication, Adaptability

Education

BSc. Biomedical Science

University of Cape Coast

2017 – 2021

Software Development

Cellusys Code Camp

2024 – 2025

Experience

Project: NetDiag — Network Diagnostics Platform

Client: Personal Project

Project Role: Full Stack Developer

Stack: Python (agents), Django, Vue/Vite

Responsibilities:

- Built a cross-platform network diagnostics platform where lightweight agents run on each office workstation and report in.
- Developed a rules engine (with optional Claude-generated explanations) to pinpoint connectivity faults and correlate peers to find silent machines.
- Surfaced all monitoring and diagnostics in a live web ops console.

Project Team Size: Individual Project

Repository Link: <https://github.com/1efferson/network-diagnostic>

Project: QR Attend — Attendance Management Platform

Client: Cellusys Academy (cohort-based training program)

Project Role: Full Stack Developer

Stack: Python, Flask, Redis, Celery

Responsibilities:

- Built a full attendance-management platform for cohorts progressing through Beginner → Intermediate → Advanced levels, using QR code check-ins.
- Implemented per-student attendance analytics with automated at-risk flagging.
- Developed anti-proxy measures through passkey verification and device binding to prevent fraudulent check-ins.
- Integrated Google Sheets export and web-push class reminders for students.

Project Team Size: Individual Project

Project: Inventory Management System

Client: Madina Estate Pharmacy

Project Role: Full Stack Developer

Responsibilities:

- Designed and implemented a web-based inventory management solution for tracking pharmaceutical products.
- Built modules for sales tracking, order notifications, and stock alerts.

Project Team Size: Individual Project

Project: E-Library System

Client: GIMPA Law School

Project Role: Full Stack Developer

Responsibilities:

- Developed a digital library platform for students to access legal texts and case files.
- Built search and category features, and ensured user-friendly navigation.

Project Team Size: 2 members.

Project: YouTube Downloader Web App

Client: Personal Project (Open Source)

Project Role: Full Stack Developer

Responsibilities:

- Built a web-based application to download YouTube videos using yt-dlp, supporting multiple formats and quality options.
- Designed a clean and responsive UI for seamless user interaction and feedback.
- Implemented backend logic for video extraction, error handling, and metadata processing.

Project Team Size: Individual Project
